

# Company Profile

## About ESO

ESO Surveyors provides specialist surveying services to the construction industry on sites throughout Australia.

We assist our clients in the construction of major roads, railways, buildings, mines and pipelines.

From our offices in Sydney and Brisbane, ESO employs over fifty staff including Project Surveyors, Graduates, Registered Surveyors, CAD Operators and administrative staff.

This year celebrates our 18th year of successful trading.

## Our Focus

We strive to provide cost-effective solutions to clients underpinned by professional and reliable service.

We do this by supplying highly trained personnel with state-of-the-art equipment.

## Our History

In 1989 Managing Director, Matthew Rowling, began sub-contracting to civil contractors with a basic set of equipment and working from an old station wagon.

Construction contractors appreciated a surveying service focussed on the needs of construction and the company's growth has continued ever since.

## Quality and Safety

ESO Surveyors operates in accordance with an independently certified Quality System to ISO 9001 standard.

As ESO Surveyors is focussed on the construction industry, safety in the workplace has always been of major importance to us. Now it is our highest priority.

ESO Surveyors maintains an OHS&R Management System in strict accordance with state legislation and independently certified to AS 4801.

In January 2000 ESO acquired another surveying company, Consurv, retaining its Managing Director, Campbell Blogg, as its new General Manager. Campbell remains in that role today.

The growth of infrastructure construction in south east Queensland spawned the opening of our Brisbane office in October 2005.

Today, we provide around 25 survey crews of skilled surveyors supported by experienced managers and admin staff.
